

FREE WEBINAR - GEA PHE Systems

BPHE Best Practice Webinar

Friday, September 14, 2012 - 11:00am EST

First as FlatPlate, and now as GEA PHE Systems, we've been helping our customers maximize the performance of their brazed plate heat exchangers for over 20 years. In this information-packed webinar we'll share that experience with you. From our files of failure mode analysis we'll show you exactly what happens inside a BPHE when it fails, and what you can do to prevent failure, both before it is installed and after. We'll cover:

- What can happen to reduce the heat transfer taking place in your heat exchanger.
- What happens inside a brazed plate heat exchanger when it fails.
- How to design your system to prevent freezing, every time.
- What maintenance will significantly reduce your chances of clogging.
- How different causes combine to result in heat exchanger failure and how you can prevent that from happening.

And all this in just 20 minutes!

Who is this open to?

- Everyone that uses heat exchangers or wants to learn about them
